

Most organizations already have the data to **manage risk better**

Fragmented data means unseen risk exposure

Example client – 204 buildings

67%

Had no valid
energy certificate

0/204

Buildings
compliant with
accessibility law

**Despite having all the
needed data**

What happens when good data isn't accessible?

1. Insurers can refuse payouts if compliance gaps contributed to a loss
2. Unmet legal requirements expose asset owners to fines, audits, and personal liability
3. Hazards that aren't mapped can't be budgeted, planned, or negotiated

Akila connects existing data to real risk obligations.

Compliance

Gaps identified and prioritized by exposure

Climate

Hazards mapped portfolio-wide

Insurance

Per-site risk profiles ready for broker negotiations

Deployment

No hardware. No site visits required to begin

Visibility changes the insurance conversation.

~€1.3M

In identified annual exposure for a 204-site public estate

<1 month

To first risk map and insurer-ready documentation

Your data is already there.

Let's put it to work.
